July 30 — Diablo Rach, Contra Costa Co., Calif : study site

Time : 0845 - 1200

Temp : 70 - 95° Wind : 0-5 Sky : clear

Species :

Mourning Dove	3	Bewicks Wren	3
Annals Hummingbird	1	Western Bluebird	2
Red-shafted Flicker	2	Blue-gray Gnatcatcher	6
Acorn Woodpecker	4	House Finch	2
Nuttalls Woodpecker	2	Lesser Goldfinch	2
Ash-throated Flycatcher	1	Brown Towhee	4
Western Wood Pewee	1	Oregon Junco	2
Scrub Jay	8		
Plain Titmouse	12	Black-tailed Deer	1
Bushtit	1	W. Fence Lizard	5
White-breasted Nuthatch	5	cat (?) sp	1

I heard a hoarse, screaming "howl, howl, howl" several times, usually in groups of three, which carried a long ways. I got to within 100 yds of the sound and could hear the sounds of throat very clearly - a gurgling growl behind the screams. This did not sound at all like a canine call but impressed me as cat-like, either bobcat or mountain lion. It moved away very rapidly, calling every couple of minutes until it must have been at least 1/2 mile away.

Sep. 15 Boat trip from San Diego to San Clemente Is, San Diego Co., Calif

Time: 0600 - 1900

Observers: Guy McCastlie, Rich Stallcup, Shum Suffel, Lee Jones, Dick Erickson, Bonnie Bowen, Steve + Karen Bailey, Don Roberson, Walt Koenig, Chris Wilson, Joe Mollan, Dan Boelter, Gary Zamzow, Jon Dunn, Ron LeValley, Steve Summers, Gordon Bolander, Mike Parmeter, Wayne Tilley, William Smith (NJ), Paul Dumont, Bob Tutzy, Bob Dyer, Bruce Elliott, Arnold Small, Heidi + Olga Clarke, Gerald Maisel, Bruce Broadbrooks, Gilbert Kins

Temp: 50-60 Wind: 10 W Sky: overcast

Comments: Lowest density of pelagic birds on any boat trip I've ever been on. Water Temp reported to be 3-5° colder than normal — and so we had no Least Petrels, Leach's Petrels, Manx Shearwaters, and New Zealand Shearwater was second county record. Only birds seen 2 miles from land included below

Species:

Eared Grebe	2	(Far offshore
Pink-footed Shearwater	30	
New Zealand Shearwater	2	
Sooty Shearwater	500	
Black Petrel	200	
Small petrel (sp)	2 - probably Least	
Brown Pelican	12	
(Brandt's Cormorant	4 - DE)	
Duck (sp)	15	
Osprey	1	
Marbled Godwit	2	
N. Phalarope	200	
Pomarine Jaeger	20 (15a, 10i)	
Parasitic Jaeger	1i	
Jaeger (sp)	20i	
West. Gull	20	
Calif. Gull	1i	
Heermann's Gull	2	
Sabine's Gull	6a	
Com. Tern	50	
Arctic Tern	299.	
Craven's Murrelet	2	
Rhinoceros Auklet	1	
(Mourning Dove	2)	
Black-throated Gray Warbler	1	
Savannah Sparrow	4	
Brown-headed Cowbird	2	

Calif Sea Lion	2
C. Dolphin	30
Flying fish	3

1973

Red-throated Loon

Gavia stellata

July 6 Half Moon Bay, San Mateo Co, Calif : 1 non-breed. plum

Pigeon Point, San Mateo Co, Calif : 2 "

Sep. 2 Pescadero Beach, San Mateo Co, Calif : 31 in breeding plumage (fading), 15 of which all took off to the south at once. One in non-breed plum. was about 1/2 mile upstream on Pescadero Creek. An obvious migrant concentration - early?

Sep 21 Pescadero Beach : 1 n-breed plum.

Oct. 13 Point Reyes N.S, Marin Co, Calif : 5 South point cove

Oct. 27 Point Reyes N.S : 30 Tomales Bay

Nov. 3 Point Reyes N.S : 30 " + Fishing Cove

Nov. 22 Malibu Lagoon, Los Angeles Co, Calif : 1

Remsen, J. V. 1973

Red-necked Grebe

Podiceps grisegena

Aug. 5 Limantour Spit, Point Reyes, Marin Co., Calif: 1 in full breeding plumage - reddish neck visible; sharply outlined white face, high crest on rear of head; large size - as big as nearby Heermann's Gull; long large bill. My first summer record.

Remsen, J.V. 1973

Horned Grebe

Podiceps auritus

Oct. 13 Point Reyes N.S., Marin Co., Calif : 25 South Point cove

Oct. 20 North end Salton Sea, Riverside Co., Calif : 2 - 100' from end of dike - good study. Clean white face, no crest above eye, long head, sharp line dividing cap from white face.

emsen,
J.V.
1973

Eared Grebe
Podiceps caspicus

July 8 Woodland Sugar Ponds, Yolo Co, Calif: 5 breed plum.

July 14 Boca Dam, Nevada Co., Calif: 4 breed plum.

Woodland Sugar Ponds: 1 breed plum.

July 21 Whitewater Rivermouth, Salton Sea, Riverside Co., Calif: 50, including one nearly complete albino

South end Salton Sea, Imperial Co, Calif: 50

July 22 Salton City, Imperial Co, Calif: 29

Aug. 31 Woodland Sugar Ponds: 5 non-breed plum

Sep. 7 Mono Lake, Mono Co, Calif: incredibly abundant, with a minimum average density of one bird per 50′ x 50′ to give an abundance estimate ~~of~~ (for the 28 square miles which we could see) of 312,238 birds. Mono Lake actually is about 100 square miles and if the density was the same over all of the lake, this would up the estimate to 1,125,000. The density seemed to be even as far as we could see and so 1 million is probably a fair estimate. One bird per 2500 sq² ft. is also very conservative – for much of the lake, 1 bird per 10′ x 10′ or 100 sq ft would be more accurate. This is the most incredible concentration of waterbirds I've ever seen – it really has to be seen to be believed

Sep. 13 Deep Springs Ranch, Inyo Co, Calif: 6

Sep. 14 North end Salton Sea, Riverside Co., Calif: 50

Nov. 25 Owens Lake Bed, Inyo Co, Calif: 1 ad. with Snows. Shorter, thicker neck, shorter stumpier bill, smaller body size — very obvious, even from a great distance, when standing with Snows.

Remsen, J.V. 1973

Black-bellied Tree Duck

Dendrocygna autumnalis

Oct. 20 South end Salton Sea, Imperial Co., Calif. 2 at Wister Unit. Found thee on Oct. 16 by state game + fish personnel. I got a number of pictures from which the birds should be readily identifiable (thus no description here). Besides some old specimens, only one other sight record exists for Calif. The birds were incredibly beautiful. When I woke up in the morning, and sat up in my sleeping bag, I saw two suspicious ducks in the air 1/4 mile away. With my binoculars I could see the huge white wing stripe and dark underparts as they circled the marsh and landed. Later we got much better looks at them but payed for it with an incredible number of mosquito bites.

Remsen, J.V. 1973

Fulvous Tree Duck

July 11 Castro Valley Ranch, Gilroy, Santa Clara Co., Calif: 8♂♂, 7♀♀. Bruce G. Elliott, Area Unit Manager for Calif. Dept. Fish + Game, took Bill Principe and I to this 4000 acre ranch in the mountains w. of Gilroy, where 30 birds had been released 35 years ago and had now increased to 300. At about 1000 hrs we found the males grazing on a field near the main ranch buildings where sprinklers had probably softened the ground. They were quite tame as long as we stayed in the car. I had only seen them once previously (1967 in Colorado) and had forgotten how enormous they were. Most were molting but were still impressive in their plumage iridescence. We got as close as 100 ft and within 50 feet of a flock of females also near the main ranch buildings

Sharp-tailed Sandpiper
Calidris acuminata

Oct. 8 Woodland Sugar Ponds, Yolo Co, Calif : 1 imm. —
see SRR.

Please fill out as accurately as possible. Include only those details of which you are certain and only those observed in the field; leave blank details not observed. Attach any additional comments or details on separate sheets. Please print or type

Species: Sharp-tailed Sandpiper Date(s): 8 October 1973

Location: Woodland Sugar Ponds, Woodland on Rd. 102

County: Yolo State: Calif Elevation:

Observer: Van Remsen Number of birds: 1

Time of Day: 1640 Light conditions: overcast but bright

Distance to bird: 50-300' Optical equipment: scopes + 10×50 binocs

Length of time observed: 20 minutes

Sex: Unknown Plumage (e.g. Breeding): Fall immature

Overall appearance and relative size: Size and shape like a Pectoral Sandpiper but in the small end of Pectoral variation in body size

Bill: same size and shape as Pectoral – longer than head and with a slight droop

Crown and forehead: bright rusty red with fine dark streaking, very sharply outlined from eye-stripe (which was much broader and more conspicuous than a Pectoral's)

Nape: brownish

Face: very whitish, much more so than Pectoral; white sharply demarcated from buffy on chest and sides of neck giving it a very white-faced, white-throated appearance which contrasted strongly with breast, cap — the pattern was very crisp and clean and strikingly different from a blurry Pectoral face

Eye: very light prominent eyestripe above eye (more conspicuous than Pectoral); dark line behind eye

Throat: whitish

Breast and sides: Very bright buffy – much more orange than the buffiest Pectoral. Where the throat and breast meet, there was a darker orange collar which was apparently a row of vertical dark streaks but they were very fine and faint.

Belly and Flanks: Whitish. Demarcation from buffy breast not particularly sharp or even

Undertail coverts: not seen

Back: like Pectoral with two buffy streaks forming V pointing towards neck

Wings: like Pectoral but much more orange in primaries — very conspicuously bright orange

Underwings: white

Rump: not seen

Uppertail coverts: dark

Upperside of tail: dark center, light sides (like Pectoral)

Underside of tail: not seen

Leg: - greenish yellow. Could see no difference between this color and that of some Pectorals

Behavior. Standing on dusty dirt dike bordering one of the ponds as if it were going to roost there with 30 Pectorals and 150 Least + Western Sandpipers. Flushed to mudflat where it perched on top of a dead weed clump

Voice: Not heard

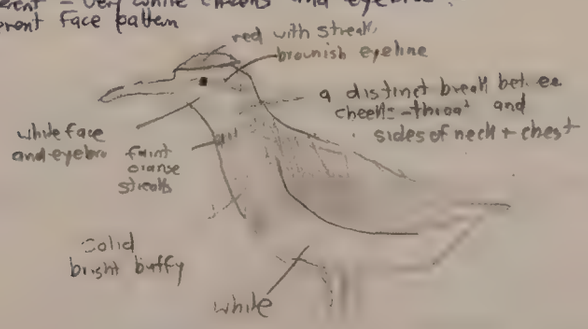
Habitat: drying settling pond in agricultural area.

How identification was decided – elimination of similar species:

Not a Pectoral because

1) Breast nearly completely unstreaked – bright buffy. The only streaks were an extremeley narrow band which formed a type of collar.

2) face and head pattern very strikingly different – very white cheeks and eyebrow – different face pattern



3) orange in primaries

4) red cap is apparently not diagnostic – we saw Pectorals with very red caps. But the sharpness with which it contrasts with very broad light eyebrow is probably diagnostic.

Not a Reeve or Buff-breasted because

1) red cap
2) body shape like Pectoral – squatty and short-legged not erect and long-legged
3) V- pattern on back like Pectoral — not scaly like Reeve or Buffie.
4) no eye-ring like Buffie. Legs not bright orange-yellow like Buffie
5) no broad white patches on upper tail coverts like Ruff

What amazed me ~~how~~ was how obvious this bird was – it really was strikingly different at 100 yds.

Prior experience with this species and similar species: One adult in breeding plumage at Barrow, Alaska 6-11-72

Bar-tailed Godwit

Limosa ~~Limosa~~ lapponica

Oct. 27 Bolinas Lagoon, Marin Co., Calif: 1 non-breed plum. Found yesterday by Lynne Stenzel. Photographed by me today — ~~See~~ won't describe until photos come back. Second California record.

Remsen, J.V. 1973

Bar-tailed Godwit
Limosa lapponica

Oct. 27 (cont)

Description: differed from Marbled Godwit in following ways

(1) rump area paler than back or tail - not clean white as in European Bar-tailed Godwits but barred with brownish as in L. l. baueri - siberian race.

(2) conspicuous eyeline highlighted by strongly contrasting dark cap

(3) back with numerous dark streakings // to body axis - different from cross-hatching on Marbled's back

(4) overall coloration lacking the rufous tone of Marbled - upperparts dark brown and underparts much paler and nearly completely devoid of pattern.

(5) bill seemed pink

(6) slightly smaller (not very noticeable) than Marbled Godwits when together

(7) call note very different, but unfortunately I can't remember what it was like

Common Tern
Sterna hirundo

July 21 Whitewater Rivermouth, Salton Sea, Riverside Co., Calif: 1 ad - contrasting dark back and whiterump, dusky primaries. ~ first identified by Guy McCaskie

Sep. 14 North end Salton Sea, Riverside Co.: 2

~~Sep. 15 South end Salton Sea, Imperial~~

Sep. 15 San Diego offshore boat trip: 50 → W, mostly imms.

Sep. 27 Moss Landing, Monterey Co., Calif: 1 ad. ident. by black shoulder mark. However at the Arcata sewage ponds on Sept. 29 a Forster's Tern (by eye patch) was also seen to have this black shoulder mark; this mark was seen by Kimball Garrett, Ron LeValley, Steve Bailey, Val DaCosta and others. The Common Tern at Moss Landing did have a Common Tern shaped eye patch.

Oct. 6 Monterey area, Monterey Co., Calif: 1 ad. Pt. Pinos prominent dark shoulder patches, dark primaries.

Oct. 20 North end Salton Sea: 10

Remsen, J.V.
1973

Arctic Tern
Sterna paradisaea

Aug. 3 Bay Bridge Toll Plaza, Alameda Co, Calif: Two ads. in full breeding plumage. Scanning over a group of 50 Forster's Terns, my eye was caught by a very gray-bellied tern. It looked smaller and shorter legged and I immediately thought Arctic Tern. After seeing that it had a very short, red bill, I was sure I was right. All present got to see all the field marks on this bird and another located later. In comparison to Forster's Terns, they were obviously smaller, grayer bellied, darker-winged, and rounder, smaller-headed, but most conspicuous was the shorter bill and legs. They were seen later in the day by John + Susanne Luther. Sight record report follows.

Sep. 15 San Diego offshore boat trip: 2 adults

Oct 6 Monterey Bay boat trip: 1 beautiful ad. with very short bill and head, very long tail, gray underparts. 3 immatures with similar shape also probably Arctics

Please fill out as accurately as possible. Include only those details of which you are certain and only those observed in the field; leave blank details not observed. Attach any additional comments or details on separate sheets. Please print or type

Species: Arctic Tern Date(s): 5 August 1973

Location: Bay Bridge Toll Plaza, Oakland

County: Alameda State: Calif Elevation: 0

Observer: Van Remsen Number of birds: 2

Time of Day: 0715 Light conditions: overcast but still OK

Distance to bird: 100 yards Optical equipment: 15-60 X scope

Length of time observed: 20 minutes

Sex: unknown Plumage (e.g. Breeding): breeding

Overall appearance and relative size: obviously a tern, but noticeably smaller overall than nearby Forster's

Bill: shorter than Forster's, all red

Crown and forehead: black

Nape: white

Face: whitish area below black cap, below eye; then a much grayer area below the white streak

Eye: ?

Throat: pale gray

Breast and sides: pale gray

Belly and flanks: pale gray

Undertail coverts: not observed

Back: gray

Wings: gray with noticeably darker gray wingtips

Underwings: not observed

Rump: not observed

Uppertail coverts: not observed

Upperside of tail: white, forked

Underside of tail: Not observed

Legs: Extremely short - bird barely cleared the ground - less strikingly shorter than Forsters

Behavior: No movement - roosting on mud

Voice: not heard

Habitat: tidal mudflat

How identification was decided - elimination of similar species:

1. head was noticeably smaller and rounder than nearby Forster's (or Common)
2. bill noticeably shorter than nearby Forster's (or Common Tern)
3. Legs strikingly shorter than nearby Forster's (or Common Tern)
4. underparts pale gray, not white (except for streak below black cap) - unlike either Forster's or Common. This overall color distance was very noticeable
5. wing tips much darker than nearby Forster's.

Prior experience with this species and similar species: Alaska 1972: 100-300 birds. Calif: ~100 birds on fall boat trips

Thick-billed Murre

Uria lomvia

Sep. 18 Monterey area, Monterey Co. Calif : 3. Two at Coast Guard Pier and one at Otter Point, Pacific Grove. One had been found here about 5 days ago by Alan Baldridge at the sea side of the pier. We found a bird there in about 10 seconds about 100 feet off the pier and was studied at leisure through scopes and photographed. Then we located another bird off Otter Point about 500 yds. out but still obvious, especially when compared to a breeding plumage Common Murre at the same distance. Then we returned to the Coast Guard Pier and found two birds, not just one, and the famous Charlie Clark from Chicago looking at them for a lifer. All three birds had very dark heads with a touch of paleness on the cheeks. The two close birds had very downcurved upper mandibles and the Otter Pt bird had a short, thick bill but the downcurvature couldn't be seen. The best mark seemed to be the angle of the bill - pointed upwards in C. Murre, held horizontally by T-b Murre. Two of the birds were photographed, one with a C. Murre in field.

Sep. 22 Monterey area : same 3 Murres in same spots ~~see~~, at least one seen by all, including Alan Baldridge, John Luther, Dave DeSante, et. al.

Sep. 27 Monterey area : 1 at Otter Pt. Neither Coast Guard Pier could be located

Oct. 7 Monterey area : 2 birds at Coast Guard Pier approached by boat to within 20' — they both had white gape marks which had been previously invisible on one and nearly so on the other
